FOR IMMEDIATE RELEASE

MERA Retains Federal Engineering for Radio System Implementation Support

FAIRFAX, VIRGINIA, April 5, 2021 — Marin County, California. The Marin Emergency Radio Authority (MERA) has retained the services of Federal Engineering, Inc., (**FE**) to provide project management and technical support during implementation of their new P25 Phase 2 trunked radio system.

Mr. Rajit Jhaver, **FE** Director, provided a vignette: “Federal Engineering has worked with MERA from the initial assessment phase of this project through the procurement of the new radio system. Because of our knowledge of MERA’s needs and environment as well as the procured system, our continued participation will be beneficial as the project moves into implementation. **FE’s** project management and technical support roles provide continuity to MERA through site construction, equipment fabrication and testing, installation, system testing, cutover, and final acceptance. We will continue to advise and provide information in a timely manner to MERA’s construction management firm as well as help coordinate between radio system vendor activities and construction activities. **FE** personnel will track and manage both the scope and schedule for the trunked radio system implementation and provide oversight and management of the radio system vendor’s specific activities. We will also provide oversight for the transition from the existing radio system to the new P25 Phase 2 radio system.”

Federal Engineering is a leading, nationwide firm providing analysis, design, procurement, and implementation support for public safety and public service communications involving traditional VHF, UHF, 700 MHz, 800 MHz, 900 MHz, and 4.9GHz mobile radio systems as well as LTE and CBRS. These services complement **FE’s** wide range of consulting services in NG911, PSAPs, RTTCs, ECCs, and EOCs. **FE’s** cybersecurity practice helps our clients defend against today’s complex and ever-changing threat landscape. **FE** also serves as trusted advisors to assist clients in understanding emerging services such as FirstNet and the impacts on their current and future plans. Since 1983, **FE** has completed thousands of communications projects for 46 state governments, as well as numerous local and federal government clients.

In addition to its public sector work, Federal Engineering provides design and implementation support services for voice, data, and video networks used in the transportation, utilities, aerospace, finance, education, publishing, and computer services industries. **FE’s** certified independence ensures that clients receive objective, unbiased consulting services that are not influenced by any technology, product, vendor, or approach.
